- QUICK SET-UP, NO CAR TUNNING REQUIRED

VaxALPR Embarcado is an automatic onboard system for license plate analysis in real time specifically designed for reading and checking license plates from a vehicle.

It's a versatile and suitable solution that offers several configurations and can run on laptops, tablet PC or rugged computers.

The camera, discreet and small sized, can be easily installed with an ordinary suction pad and connected to the computer by a USB cable.

The system reports an audible and visual alert when a license plate is found in a black/grey list. All readings are registered in a file or database for later use.

- ✓ ROAD SURVEILLANCE
- ✓ MONITORING OF PARKED VEHICLES
